

DECANT STATION

Owner: City of Marysville
Contact: Jeff Laycock, Project Engineer, 360.363.8274
Completed: 2014
Project Costs: Design Services – \$127,350
Construction Cost – \$960,000

Gray & Osborne provided planning, design, and construction administration services to the City of Marysville to retrofit their existing decant facility and material storage areas at the City's Public Works site. Gray & Osborne worked with the City to develop a master site plan that allowed for the functional use of the City's current equipment and operations, reduced risk of pollutants entering nearby receiving waters, and allowed for the retrofit/addition of material storage areas and accommodating future operational needs as additional funds become available. This information was summarized in a predesign report. The project included the construction of a 2,000 square-foot decant facility with two decant bays, a holding bay, and a dry storage area. An optional third decant bay was also included in the design, but was not constructed due to limited available funds.

Project Team

Steve Clarke, P.E., P.M.P., Project Manager
Myron Basden, P.E., S.E., Structural Engineer
Stacey Clear, P.E., Project Engineer
John Gallucci, P.E., Electrical Engineer

Rick Bond, P.L.S., Survey
Aaron Pease, P.E., LEED A.P., QA/QC
Siew Tan, P.E. (PanGEO, Inc.), Geotechnical
